

It's best to solve all your
IT-infrastructure problems
in one go.

visionapp **Unisono Dynamic Desktop**

visionapp Unisono Dynamic Desktop

visionapp Unisono Dynamic Desktop is the first holistic approach to comprehensive improvements of the desktop architecture – for medium-sized to large global companies and organizations. All relevant IT areas become more agile, more flexible, more secure, and significantly more cost-efficient. This provides decisive benefits to both end users and the company.

**The concept is clear:
private cloud computing plus virtualization.**

Typically, when it comes to cost issues, distributed client/server structures no longer appear to meet today's requirements. Centralization and virtualization through cloud computing is an alternative – but the question is: How do you implement a comprehensive solution that meets both the needs of the company or its operating departments and the end user's requirements?

Virtualization and cloud computing with Unisono are based on powerful standard technologies such as Citrix, Microsoft and VMware. A layer used for virtualization ensures that software and hardware are separated from each other, which allows for a flexible use of end devices – in line with the "bring your own computer" concept.

The result is convincing: the IT workplace of the future.

Typically, companies that have implemented their central desktop and application management solution with our help, find that their IT has developed exactly as forecasted and quantified by us. The users in the operating departments are provided with flexible working conditions – at any location, irrespective of the end device used – while the company benefits from increased data security and significantly reduced IT-related cost.

visionapp Unisono Dynamic Desktop helps to greatly increase the agility and response times of IT departments. Effectively reducing the consumption of resources, our central desktop and application management solution offers important potential for savings.

**visionapp Unisono Dynamic Desktop:
How Your Windows-based Infrastructures Will Change.**

Decentralized server/client landscapes, set up at different locations, have one thing in common: they are difficult to maintain and provide support for. Yet, users in the companies – just as customers, partners and suppliers – expect consistent access to data sources and applications. And that is precisely what visionapp Unisono Dynamic Desktop offers.

The traditional individual computer workplaces are replaced with virtual desktops provided through a central data center. All that is required for access is a suitable device with an Internet connection – visionapp Unisono Dynamic Desktop does the rest to ensure consistent access to all data and applications.

Individual desktops are provided from a central point, users have direct access to their desktops from any location. With each desktop providing a wide range of options for a highly individual and personalized configuration, users are in a position to set up their own environments – within the boundaries set by central IT. These environments are to a large extent independent of the access method used. Whether the user works from his desktop in the office, a laptop, a smart phone or from any suitable device at home, the look and feel and, most importantly, the functionality is always the same.

As regards local hardware, the traditional Windows workstations can be systematically replaced with thin clients, which use considerably less energy. This not only helps to reduce hardware cost, it also contributes to your company's ecological balance sheet – the CO₂ emissions caused by the company's workstations can be reduced by up to 80%.

**Our future-oriented solution for desktops,
applications and costs.**

The concept is clear: private cloud computing plus virtualization.

We Guarantee Declining Operating Costs.

With visionapp Unisono Dynamic Desktop, the company manages the user desktops centrally while improving data security. When it comes to company-wide application delivery, our solution accelerates testing, providing and rolling out the applications as well as improving supportability. Being able to respond much faster to changing business requirements, TCO can be reduced by up to 45 percent.

The savings achieved in your company with visionapp Unisono can already be accurately quantified in the planning stage – we are prepared to commit ourselves to achieving these savings and guarantee success – before implementation, and in writing.

Unisono Dynamic Desktop

Today's fast-changing business requirements demand flexible and quick responses. In doing so, a company can only be as agile as its IT.

Using visionapp Unisono Dynamic Desktop allows organizations to reduce the cost of Windows-based IT by 45 percent and more. This solution developed by visionapp is ideally suited for medium-sized and large organizations.

We improve your competitiveness by allowing your employees to use their working time more effectively. In addition, a more powerful IT infrastructure significantly increases the innovation rate in your company.

Your Benefits:

- Total cost of ownership reduced by up to 45% - guaranteed
- Automated installation, provisioning and customization of desktops – flexibly and centrally
- Increased corporate agility
- Improved flexibility for users and high ease of use through uniform user interface
- Improved security through integrated SSL encryption and central data storage
- Reliable business continuity and disaster recovery based on all major virtualization platforms
- Meets all compliance requirements
- Reduction in CO₂ emissions by up to 80% through thin clients

Many would call it bold to address all the pressing issues related to your IT infrastructure at the same time. We say it is just intelligent.

Who is visionapp AG?

visionapp is a leading provider of working solutions in the fields of cloud computing and Software-as-a-Service (SaaS) designed to give our customers and partners a competitive edge.

With our products and methods for a more exhaustive automation of IT operations, a significant cost reduction is guaranteed. Drawing on over ten years of experience in the building of central IT structures, visionapp is a leading supplier in Europe. Our well-proven technologies are being used by many notable companies and organizations.
